

Contributions of marine capture fisheries to the domestic livelihoods and seafood consumption of Chile

Draft Chile

Camila Vargas e Ignacia Rivera

Scope 1: Fisheries Context

We used landing records from SERNAPESCA to identify the main species in terms of landed volume over the last five years (**Table 1**). Current data availability could also allow us to identify this species at the regional level and for each subsector artisanal and industrial.

Most important species are

Species	2013	2014	2015	2016	2017	Total	SD
Engraulis ringens	803,404	817,900	732,659	337,436	625,697	3,317,096	56,988.69
Strangomera bentincki	236,968	543,278	793,337	280,421	344,262	2,198,266	50,767.44
Trachurus murphyi	225,443	267,590	264,475	317,241	341,555	1,416,304	39,930.36
Lessonia nigrescens	313,341	219,998	230,622	155,740	0	919,701	31,204.85
Dosidicus gigas	106,249	176,602	247,917	180,914	152,537	864,219	15,162.63
Lessonia trabeculata	38,724	60,531	144,142	49,802	71,771	364,970	8,223.66
Scomber japonicus	31,226	24,127	69,373	57,769	64,915	247,410	4,682.51
Gracilaria spp.	46,053	32,336	90,614	26,413	47,584	243,000	8,509.76
Normanichthys crockeri	55,045	50,543	52,224	20,169	61,192	239,173	6,582.21
NA	0	0	0	0	211,257	211,257	26,805.16
